

SPECIFICATIONS

The total stretch in fiber rope may be divided into three distinct modes.

1. Elastic stretch - in which recovery after unloading is total and immediate.
 2. Recoverable stretch difficult to allow for because recovery toward the original length is gradual.
 3. Non - recoverable stretch even the best ropes never quite recover their original length due to changes in intermolecular geometry.
- a) KT3 & Plaited Aramid Cords high modulus Polyethylene Superline Aramid.
 - b) Paraline
 - c) 3 Strand super Pre-stretched 8 Plait super stretched.
 - d) 8 Plait Matt Polyester 16 Plait Polyester Braid Superline Polyester

HOW TO ORDER

Endless Slings : Vertical Capacity in "Tonnes X Circumferential length in meter or effective length

Slings with Eye Loops (webbing) : Vertical Capacity in Tonnes X effective length in Meter

Multileg : Capacity of each leg at 0° x length of each leg and total capacity at 00
